DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, 36 and 39-41, drawn to an electrotherapy apparatus and method, classified in class 607, subclass 69.
 - II. Claims 13-19 and 20-26, drawn to an electrotherapy apparatus, classified in class 607, subclass 68.
 - III. Claims 27-35, drawn to an electrotherapy apparatus, classified in class 607, subclass 4.
 - IV. Claims 37-38, drawn to an electrotherapy apparatus, classified in class 607, subclass 5.

The inventions are distinct, each from the other because of the following reasons:

Inventions I. and II. are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require a control means with an electric circuit to control the shape of the waveform. The subcombination has separate utility such as an electrotherapy apparatus not requiring that the polarity be reversed, but rather providing a control mean to control a constant predetermined energy that is not reversed.

Inventions I. and II. and inventions III. and IV. are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require an inductor to store energy. The subcombination has separate utility such as an electrotherapy apparatus not requiring use of a non-magnetic electrical energy storage section, but rather using an inductor to store the magnetic energy.

Inventions III. and IV. are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination provides energy storage by way of an inductor section not requiring a diode, a capacitor or a protective resistor. The subcombination has separate utility such as an electrotherapy apparatus not requiring use of a stimulation pulse that provides a predetermined amount of energy to the patient, but rather using a microcontroller to control the drive circuit and the charging circuit of the apparatus.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

The Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
